Green Machine

Looking for a computer that your kids can use without sending you into worry mode? The Zonbu Desktop-mini (\$99, plus \$15 per month) is an eco-friendly hard drive that automatically backs up all of your family photos, videos, and important documents on a "disaster-proof" server. You can access everything on your hard drive remotely at zonbu.com, which means your child can finish her book report at Grandpa's house just by logging on to your account. This compact (weighs just two pounds) kid-proof computer comes loaded with pre-installed programs and connects to a recycled monitor, keyboard, and mouse. And as a Zero Emissions PC, this green gadget saves lots of energy (it consumes a tenth of the power of a typical desktop) and reduces your CO₂ emissions.

{ BACK TO SCHOOL }

Ten Under \$10
